

## Engineering Manager

Sensotek is a hardware and software IOT solutions provider and have developed a remote wireless machine health monitoring system. Our systems are deployed and gather data from machines all around the world, enabling predictive maintenance, reducing costly downtime and optimising process efficiencies. As a rapid growing company, we are seeking a talented individual who can help drive our engineering team to meet their goals and increase their performance through personal development.

### What you will be doing:

- Leading a team of multi-disciplined engineers in the development of our sensing technologies and cloud-based web platform.
- Coaching and mentoring members of the team with emphasis on long term career development
- Create a supportive and trusting environment to facilitate full team engagement
- Provide regular, ongoing feedback to team members on performance and development
- Collaborating with the Product Manager and the Engineering Leadership Team to develop and execute on our technology roadmap
- Supporting the NPI Team for the introduction of our products into production
- Maintaining and improving our current hardware and software release processes
- Be a leader within the organization, ensuring best practices and responsibility is embedded across all engineering effort
- Report to senior management / leadership on team objectives, development progress and key performance indicators
- Ensuring control of the department budget
- Be accountable for all team deliverables, ensuring appropriate prioritization and resource allocation to deliver on-time and to the required quality standard
- Support the tender process for our client projects
- Support customer meetings & our global service team, providing technical input as required

**Essential criteria**

- 10 years' experience in a technical development role
- Proven experience in a technical leadership role, with a minimum of 5 years' recent experience leading multi-disciplinary team (Electronics, Software, Mechanical) and their Personal Development Plans
- Proven experience of innovation driven product development
- Proven track record of delivering technical projects to customer requirements to a high standard from concept to production.
- Excellent teamwork and communication skills
- Good understanding of agile development processes
- Willingness to travel to our global customer sites
- BEng / BSC / MSC in engineering or equivalent minimum 2.1

**Desirable criteria**

- Management qualification or training
- Experience or knowledge of cloud-based technologies and frameworks
- Experience of electronic and software developments with respect to sensing technologies
- Good working knowledge of wireless systems

**The successful applicant will be offered a competitive salary and benefits package and continuous personal development within this fast paced and growing company.**
